Summary

Software Developer with 3+ years of experience building scalable, high-availability backend systems using Java and Spring Boot. Experienced in microservices and event-driven architectures with Kafka, and deploying cloud-native applications on AWS. Skilled in REST API development, Docker, Kubernetes, and CI/CD pipelines, with a strong foundation in data structures and system design, along with hands-on experience integrating AI/ML-driven features into backend systems.

Education

- **Vellore Institute of Technology** Chennai, India
B.Tech in Computer Science (Specialization in AI & ML) — CGPA: 8.3 2019 – 2023
 - Published an IEEE research paper on recommendation systems using the Apriori algorithm and chi-square test, improving prediction accuracy and handling large-scale data patterns.

Experience

- **Software Developer** Amdocs, Pune
July 2023 – Present
 - Developed and enhanced Java 17 and Spring Boot backend microservices for Comcast and AT&T telecom platforms, supporting cloud-native workflows that handle 1M+ daily customer requests across high-availability production environments.
 - Implemented Kafka-based event-driven communication across 8+ microservices, processing 50K+ events/day at sub-200ms end-to-end latency, decoupling synchronous REST flows and improving downstream throughput by ~35%.
 - Designed and optimized RESTful APIs in Spring Boot, improving p95 response time by ~45% through query tuning, database indexing, and Redis-based caching of frequently accessed reference data and lookup tables.
 - Containerized 10+ microservices with Docker and deployed on Kubernetes and OpenShift across 4 environments (Dev, QE, PET, PROD), cutting deployment time from ~2 hours to under 15 minutes and enabling horizontal auto-scaling.
 - Built and maintained CI/CD pipelines using Jenkins, GitHub Actions, Maven, and Git, automating build, test, and deployment workflows across 6+ services and reducing the end-to-end release cycle time by approximately 60%.
 - Contributed to AT&T cloud migration initiatives, helping transition 15+ customer workloads from legacy on-premise infrastructure to cloud-native distributed platforms with zero production downtime and full observability coverage.
 - Built custom MCP-based developer tooling integrated with Cursor AI, enabling natural-language driven Kafka, Kubernetes, and log-inspection workflows that saved the engineering team an estimated 5+ hours of toil per week.
 - Enhanced observability with Spring Boot Actuator, centralized logging, and Kubernetes liveness/readiness probes, reducing mean time to detect production issues by ~40% and sustaining 99.9% service uptime in production.

Projects

- **Distributed Payment Orchestration & Fraud Intelligence Platform** (*Java 21, Spring Boot 3.3, Kafka, PostgreSQL, Redis, Docker, Kubernetes*)
 - Architected a cloud-native microservices payment orchestrator with dynamic multi-provider failover (Stripe, Razorpay, PayPal) using Resilience4j circuit breakers and retries, achieving sub-1200ms routing latency.
 - Guaranteed exactly-once payment processing via Redis-backed idempotency keys and the Transactional Outbox Pattern, and built Kafka Streams topologies with tumbling/sliding windows for real-time velocity checks and merchant analytics.
 - Developed a hybrid fraud engine combining Redis rules with pgvector semantic similarity search and a Spring AI RAG analyst assistant; deployed via multi-stage Docker images and Helm charts on Kubernetes with OpenTelemetry, Prometheus, and Grafana.

Skills

- **Languages & Core:** Java, SQL, YAML, Data Structures & Algorithms
- **Frameworks:** Spring Boot, Spring MVC, Spring Data JPA, Hibernate, Spring Core, Resilience4j, Apache Tomcat
- **Cloud, Containers & Messaging:** AWS, Docker, Kubernetes, OpenShift, Helm Charts, Apache Kafka, Kafka Streams
- **Databases:** PostgreSQL, Apache Cassandra, Redis, pgvector
- **DevOps & Tools:** Jenkins, GitHub Actions, CI/CD Pipelines, Git, Maven, Nexus Repository
- **AI / ML:** Spring AI, LLM Integration, RAG, Prompt Engineering, Machine Learning (Regression, Classification, Clustering), Deep Learning (Fundamentals), GitHub Copilot, Cursor AI, Tabnine
